SF DOJO

Rishinjuku Karate – Website Specification

FastAPI + Python • Pure HTML + HTMX • No custom JavaScript • No CSS frameworks
Simple, clean, mobile-friendly • Admin panel for non-developers • Secure by design

Specification document intended as a detailed prompt for GLM 5.3 Flash or any coding LLM.
Use this to generate a complete, production-ready project with dummy data.

Club: SFDOJO vzw – Rishinjuku Karate ■■■
Motto: Self Defense for Self Confidence
Location: Near Leuven (Banhagestraat 75, 3052 Oud-Heverlee / Blanden)
Instructor: Filip Swennen (Japanologist)
Contact: info@sfdojo.be • +32 471 68 75 98 • IBAN BE52 7340 3800 4609

1. Project Goal & Hard Constraints

Build a clean, professional, and extremely simple website for the SF Dojo karate club (currently on WordPress). The site must be maintainable by non-technical people (including a 60-year-old dojo leader) through an easy admin panel. Changes must appear immediately on the public site.

Hard constraints (must be followed strictly):

Backend: FastAPI + Python 3.11+
Frontend: Pure HTML5 templates (Jinja2) + HTMX only. No custom JavaScript. No Tailwind, Bootstrap, or any CSS framework.
Styling: One single embedded style block in the base template is allowed (minimal, semantic, responsive). No external CSS files.
Interactivity: Only via HTMX attributes (hx-get, hx-post, hx-swap, hx-target, etc.).
Database: SQLite with SQLAlchemy (or pure SQL) for simplicity. Easy to back up.
Auth: Simple session-based login for exactly 3 users (dojo leader, right-hand man, developer). Passwords hashed.
Responsive: Must look good and be usable on both mobile phones and desktop PCs.
Languages: 5 languages - Dutch (nl, default), French (fr), English (en), Spanish (es), Japanese (ja).
Themes: Light and Dark mode (CSS prefers-color-scheme + optional HTMX toggle that sets a cookie).
Hero: Simple image slideshow or video area (HTMX-powered prev/next or pure HTML video / iframe).
Security: Secure by default. Mention Wazuh agent notes and optional light Kafka logging stub.
Payments: Simple page that shows IBAN + instructions for Bancontact via KBC app. Link to a PDF invoice/info if needed.
Dummy data: Include a seed script so the site is immediately usable for testing.

2. Recommended Directory Structure

Keep the structure flat and obvious so a non-developer (or future maintainer) can find everything quickly.

```
sfdojo/
■■■ app/
■   ■■■ __init__.py
■   ■■■ main.py             # FastAPI app + all routes
■   ■■■ auth.py             # Login, sessions, 3 hardcoded/env users
■   ■■■ database.py         # SQLite + SQLAlchemy setup
■   ■■■ models.py           # Section, Page, User, ScheduleItem, etc.
■   ■■■ crud.py             # Create/Read/Update/Delete helpers
■   ■■■ i18n.py             # Translation dictionaries (nl/fr/en/es/ja)
■   ■■■ templates/
■   ■   ■■■ base.html       # Layout + embedded minimal CSS + HTMX
■   ■   ■■■ index.html      # Home / hero
```

```
■   ■   ■■■ page.html        # Dynamic page renderer
■   ■   ■■■ schedule.html
■   ■   ■■■ prices.html
■   ■   ■■■ contact.html
■   ■   ■■■ payments.html
■   ■   ■■■ admin/
■   ■   ■   ■■■ login.html
■   ■   ■   ■■■ dashboard.html
■   ■   ■   ■■■ sections_list.html
■   ■   ■   ■■■ section_form.html
■   ■   ■■■ partials/        # HTMX fragments (menu, hero slides, etc.)
■   ■■■ static/
■       ■■■ logo.png         # Place the SF Dojo logo here
■       ■■■ images/          # Hero images (dummy ok)
■■■ seed.py                  # Insert dummy data
■■■ requirements.txt
■■■ .env.example
■■■ README.md                # How to run + admin instructions for non-devs
■■■ notes/
    ■■■ wazuh_kafka.md       # Security integration notes
```

3. Public Website Features

Pages that must exist (content from DB so admin can change them):

- Home: Logo + title “RISHINJUKU KARATE ■■■” + motto “Self Defense for Self Confidence” + short intro + hero slideshow/video + link to schedule/prices/contact.
- Disciplines / About: MMA, Zelfverdediging, Ghost Kickboksen, Rishinjuku Karate, G-Karate (inclusief voor personen met beperking).
- Schedule (Lessenrooster): Table or list of training times (dummy data from current site).
- Prices (Prijzen): Simple pricing table or text.
- Contact: Address, phone, email, map link (optional), IBAN.
- Payments: Clear instructions – “Betaling via overschrijving (IBAN) of Bancontact in de KBC-app. Zie bijgevoegde PDF voor details.”
- Optional: Blog / News section (simple list of sections).

Hero section: Show 3-5 images (or a video) in a simple carousel. Implement with HTMX: buttons Vorige / Volgende that swap the image container (hx-get=/hero/slide/{id} hx-target=#hero). Fallback: static images stacked or a pure HTML video tag. No custom JS.

Language switcher: Simple links or select in the header (NL | FR | EN | ES | JA). Changing language reloads the page with ?lang=xx or sets a cookie. All visible text comes from i18n dictionaries.

Theme: Light by default. Dark mode via prefers-color-scheme and a small HTMX toggle that sets a cookie and adds class=dark to body.

4. Admin Panel (Extremely Simple for Non-Developers)

Only 3 people can log in (credentials in .env or a small users table). The admin must feel as easy as a basic WordPress page editor, but much simpler.

Admin features:

- Login page (username + password).
- Dashboard: Overview of all sections/pages with “Edit” and “Delete” buttons.
- Add new section: Simple form with fields: Title, Content (textarea), Page/Slug, Order, Language (or auto for all).
- Edit section: Same form, pre-filled. HTMX so saving updates the list immediately.
- Delete section: Confirm button, then HTMX removes it from the list and from the public site.
- Optional: Manage schedule items and prices the same way (CRUD).
- All changes are immediately visible on the public website (no rebuild needed).
- Big, clear buttons, large fonts, high contrast so a 60-year-old can use it on phone or PC.

Use HTMX for all admin forms (hx-post, hx-target=#sections-list, hx-swap=outerHTML) so the page never fully reloads and feels instant.

5. Security, Wazuh & Kafka (Light)

- HTTPS only in production (note in README).
- Secure session cookies (httponly, samesite=lax, secure).
- CSRF protection via HTMX headers or simple token.
- Password hashing (bcrypt or passlib).
- Rate limiting on login (simple in-memory or slowapi).
- No user-generated HTML without sanitization (use bleach or escape).
- Wazuh: Add a short note file explaining how to install the Wazuh agent on the server and what to monitor (auth logs, file integrity of templates/static).
- Kafka (optional light): A simple logging stub that can send structured events (login success/fail, section created/deleted) to a Kafka topic if KAFKA_BROKER is set. Otherwise just log to stdout/file.

6. Dummy Data & Testing

Include a **seed.py** script that creates:

- The 3 admin users (passwords documented in README, change immediately).
- Sample sections for Home, About, Disciplines, Schedule, Prices, Contact, Payments.
- Realistic dummy schedule (Maandag Grappling 19-20u, Dinsdag Karate 18-20u, etc.).
- Dummy prices and contact info matching the real club.
- A few hero image placeholders (or instructions to drop images in static/images/).

After running the seed, the site must be fully usable for testing both the public site and the admin panel.

7. README.md Must Contain

- How to install (pip install -r requirements.txt)
- How to run (uvicorn app.main:app --reload)
- How to seed dummy data
- Default admin credentials (and warning to change them)
- How to add the logo and hero images
- How a non-developer uses the admin panel (step-by-step with screenshots description)
- Language and theme notes
- Deployment notes (Docker optional, HTTPS, Wazuh)

8. Ready-to-Use Prompt for GLM 5.3 Flash

Copy everything below this line and paste it into GLM (or any coding LLM):

```
You are an expert Python/FastAPI developer. Generate a complete, clean, production-ready website for SF Dojo (F

TECH STACK:
- FastAPI + Python
- Jinja2 templates
- HTMX for all dynamic interactions (no custom JavaScript)
- No Tailwind, no Bootstrap, no CSS frameworks
- Only one embedded <style> block in base.html (minimal, responsive, clean, professional look)
- SQLite + SQLAlchemy
- Session-based auth for exactly 3 users

FEATURES:
1. Public site with Dutch as default + FR, EN, ES, JA language switcher
2. Light/Dark mode
3. Hero section with simple HTMX image slideshow (or video)
4. Dynamic pages/sections stored in the database (Home, Disciplines, Schedule, Prices, Contact, Payments)
5. Simple admin panel where non-developers can add, edit, and delete sections with HTMX forms. Changes appear i
6. Payments page showing IBAN BE52 7340 3800 4609 and instructions for Bancontact/KBC.
7. Dummy data seed script
8. Security notes for Wazuh + optional Kafka logging stub
9. Clean directory structure as specified
10. Detailed README.md for non-technical users
```

```
Make the design pro, simple, and clean. Large readable fonts, good contrast, mobile-friendly. Logo goes in stat
Generate all files with full content. Use realistic dummy data based on a Belgian karate club near Leuven focus
Start by listing the full directory structure, then output every file.
```

End of specification. This document can be given directly to a coding LLM together with the prompt above.
